Windsor Course
10 Furlong races, non-handicap
From mid 1988 to the end of the 2006 flat season

All Races
Conclusions

- These are extremely good races for followers of favourites; by backing every one the initial stake of £252 would have increased to £285.41, an impressive profit of 13.2% - 33.4 points at first show; by backing at starting price the profit would have been 3.6% - 9.1 points, and on the Tote 6.7% - 17.0 points.
- Always consider a wager if the favourite is drawn low, 37 of these won from 82 races, 45.1% bringing about a very nice profit of 14.0% - 11.5 points at first show. This healthy return would have been more by means of increasing the stake if the price drifts out or remains the same at the off, 19 of these were successful from 36 races, 52.7% at average odds of 1.35 [just under 11/8] giving rise to an excellent profit of 24.0% - 8.6 points at starting price.
- Back the market leader with some confidence if it is drawn in the middle, 39 such horses won from 80 races, 48.7% delivering a superb profit of 42.9% - 34.3 points at first show.
- Be very careful if the top horse in the betting is drawn high, only 32 of these went on to win from 90 races, 35.5% leading to a sizeable loss of 13.9% - 12.5 points at first show.
- Think about having a wager if the going is firm, good to firm, good or soft, under these conditions 100 favourites won from 225 races, 44.4% producing a handsome profit of 19.3% - 43.5 points at first show.
- Be cautious if the going is good to soft or heavy, under these conditions only eight market leaders won from 27 races, 29.6% leading to a significant loss of 37.5% - 10.1 points at first show.
- Always consider backing the favourite in April and May, during these two months 37 such horses won from 72 races, 51.3% providing a huge profit of 55.3% - 39.8 points at first show.
- Think about having a punt in July, September and October, during these months 28 favourites won from 65 races, 43.0% creating a profit of 8.2% - 5.3% points at first show.
- Be very careful of backing the 'jolly' in March, June, August and November, during these times only 43 such horses won from 115 races, 37.3% leading to a loss of 10.2% - 11.8 points at first show.
- Think about backing the top horse in the betting to be placed on the Tote, 187 of these were placed from 245 races, 76.3% returning a profit of 7.4% - 18.2 points.

- If the favourite is drawn in the middle consider backing it to be placed on the Tote, 65 such horses were placed from 79 races, 82.2% at an average return of £1.40 generating a profit of 15.0% - 11.8 points.
- If the going is firm, good to firm, good, soft or heavy give some thought to backing the market leader to be placed on the Tote, 175 of these were placed from 223 races, 78.4% bringing about a profit of 9.8% - 21.8 points.
- In March, April, July or October think about backing the 'jolly' to be placed on the Tote, 75 such horses were placed from 91 races, 82.4% giving rise to a profit of 15.3% - 13.9 points.
- If considering a bet not just the favourite note that 37.6% of all winners came from a high draw compared to 29.3% from a low stall, and 32.9% from the middle; clearly there is little significance in the draw bias.
- Note that 78.5% of overall winners came from the top three in the betting, about 2.6% higher than the national average.
- Top trainers: Sir M. Stoute 26 winners followed by J. Gosden 17 and L. Cumani 13.
